Summary

Computer Science undergraduate at VIT Chennai with hands-on experience in software engineering, AI application development, and enterprise software. Skilled in Python, Java, C++, Git, LLM applications, NLP, and machine learning, with projects spanning healthcare, forecasting, and business intelligence.

Education

Vellore Institute of Technology (VIT), Chennai	Expected 2027
B.Tech in Computer Science	CGPA: 8.15
Ryan International School, Mumbai	2023
Senior Secondary School (CBSE)	80.8%
Delhi Public School, Kanpur	2021
High School (CBSE)	96.67%

Technical Skills

Languages: Python, Java, C, C++

Frameworks: Flask, HTML5, CSS3

AI: LLM Applications, Prompt Engineering, NLP, Machine Learning, Time-Series Forecasting

Developer Tools: GitHub, VS Code, Antigravity

Databases: MongoDB Atlas, SQLite

BI & Analytics: Dashboard Development, Data Visualization, Business Intelligence

Experience

SRF Limited May 2026 – Jul 2026
IT Intern

- Contributed to enterprise software supporting business operations and decision-making; improved usability, functionality, and UX of internal applications.
- Developed and enhanced BI dashboards for reporting, visualization, sales analytics, financial performance reporting, and enterprise data workflows.
- Built AI-assisted features for information retrieval and business insights; supported workflow visualization and collaborated cross-functionally in an Agile environment.
- Strengthened software engineering, analytical, debugging, and problem-solving skills through enterprise projects while maintaining confidentiality.

Projects

FedLLM for Explainable Traffic Prediction

Tech Stack: Federated Learning, QLoRA, Qwen2.5, Flower, FedCSS, NetworkX, PeMS

- Developed a privacy-preserving federated LLM for 15–60 minute traffic prediction using QLoRA and Qwen2.5.
- Implemented FedCSS aggregation using traffic volume, temporal variance, sensor reliability, and spatial coverage.
- Generated flow-theory explanations and dynamic Dijkstra routes from predicted traffic speeds.

AI-Powered Multilingual Healthcare Assistant

Tech Stack: NLP, Multilingual Voice/Text, Disease Prediction, MongoDB

- Developed an AI healthcare assistant supporting multilingual voice/text interaction and NLP-based processing for user queries.
- Implemented disease prediction capabilities using symptom-oriented input and integrated MongoDB for data storage and retrieval.
- Designed the application to improve accessibility through multilingual interaction while providing AI-assisted healthcare information.

Achievements

- Certification:** Google SmartBridge Artificial Intelligence; IBM: Getting Started with AI; Google Cloud: Gemini Learning Path; Generative AI for Developers.
- Consistent in solving DSA questions across coding platforms such as LeetCode and CodeChef.
- Won an internship at the HackerRank sponsored national hackathon, Glitchcon 2.0.
